Définition d'Open Access

Open Access signifie l'accès immédiat, permanent, libre, gratuit et électronique aux publications scientifiques. Les augmentations démesurées des prix des maisons d'édition, le grand retard entre la remise et la publication d'un article, la cession forcée des droits d'auteurs aux maisons d'édition et la restriction de la diffusion de résultats de recherches sont les déclencheurs principaux de l'intérêt à Open Access.

Ce que j'évacue d'emblée du débat

Les publishers **prédateurs** et leurs journaux « **attrape-nigauds** »

- Qui ne trompent personne sauf les **auteurs** vraiment très **nigauds**
- C'est ici bien pire que les faux sacs **Louis Vuitton**
 - car les **auteurs payent** les faux **aussi chers** que les vrais
 - et les **faux journaux** sont plus **faciles à démasquer** que les faux sacs
- Un auteur sérieux doit **s'informer** avant de soumettre.

Scholarly Open Access

List of Predatory Publishers 2014

By Jeffrey Beall

Released January 2, 2014

The gold (author pays) open-access model has given rise to a great many new online publishers. Many of these publishers are corrupt and exist only to make money off the author processing charges that are billed to authors upon acceptance of their scientific manuscripts.

There are two lists below. The first includes questionable, scholarly open-access publishers. Each of these publishers has a portfolio that ranges from just a few to hundreds of individual journal titles.

The second list includes individual journals that do not publish under the platform of any publisher — they are essentially standalone, questionable journals.

In both cases, we recommend that researchers, scientists, and academics avoid doing business with these publishers and journals. Scholars should avoid sending article submissions to them, serving on their editorial boards, reviewing papers for them, or advertising in them. .

List of predatory publishers

Year	Number of predatory publishers

What are the benefits of COPE membership?

FEATURED

Principles of Transparency and Best Practice in Scholarly Publishing

COPE is just one of a number of organisations that is seeing a large rise in applications for membership from new journals. Although we very much want to encourage and support legitimate new journals, we are also mindful that many new journals are not currently sufficiently transparent about their business practices and authors in particular may be unable to judge the legitimacy of these journals. Together with OASPA, DOAJ, and WAME we have therefore compiled a minimum set of criteria that journals will be assessed against when they apply for membership at one of our organisations. The [full criteria can be seen here](#) and we welcome feedback. We encourage authors and anyone else who is unfamiliar with a journal to use these criteria in assessing a journal.

Principles of Transparency and Best Practice in Scholarly Publishing

COPE is just one of a number of organisations that is seeing a large rise in applications for membership from new journals. Although we very much want to encourage and support legitimate new journals, we are also mindful that many new journals are not currently sufficiently transparent about their business practices and authors in particular may be unable to judge the legitimacy of these journals. Together with OASPA, DOAJ, and WAME we have therefore compiled a minimum set of criteria that journals will be assessed against when they apply for membership at one of our organisations. The [full criteria can be seen here](#) and we welcome feedback. We encourage authors and anyone else who is unfamiliar with a journal to use these criteria in assessing a journal.

CODE OF CONDUCT AND BEST PRACTICE GUIDELINES FOR JOURNAL EDITORS

{ Note: This document combines the original COPE Guidelines from 1999, the Code of Conduct developed in 2003, and the Best Practice Guidelines developed in 2007. This revision was developed after wide consultation with COPE members and approved by the COPE Council on 7th March 2011. }

CODE OF CONDUCT FOR JOURNAL PUBLISHERS

Publishers who are Committee on Publication Ethics members and who support COPE membership for journal editors should:

- Follow this code, and encourage the editors they work with to follow the COPE Code of Conduct for Journal Editors (http://publicationethics.org/files/u2/New_Code.pdf)
- Ensure the editors and journals they work with are aware of what their membership of COPE provides and entails
- Provide reasonable practical support to editors so that they can follow the COPE Code of Conduct for Journal Editors (http://publicationethics.org/files/u2/New_Code.pdf)

Publishers should:

- Define the relationship between publisher, editor and other parties in a contract
- Respect privacy (for example, for research participants, for authors, for peer reviewers)
- Protect intellectual property and copyright
- Foster editorial independence

CODE OF CONDUCT FOR JOURNAL PUBLISHERS

Publishers should work with journal editors to:

- Set journal policies appropriately and aim to meet those policies, particularly with respect to:
 - Editorial independence
 - Research ethics, including confidentiality, consent, and the special requirements for human and animal research
 - Authorship
 - Transparency and integrity (for example, conflicts of interest, research funding, reporting standards)
 - Peer review and the role of the editorial team beyond that of the journal editor
 - Appeals and complaints
- Communicate journal policies (for example, to authors, readers, peer reviewers)
- Review journal policies periodically, particularly with respect to new recommendations from the COPE
- Code of Conduct for Editors and the COPE Best Practice Guidelines
- Maintain the integrity of the academic record
- Assist the parties (for example, institutions, grant funders, governing bodies) responsible for the investigation of suspected research and publication misconduct and, where possible, facilitate in the resolution of these cases
- Publish corrections, clarifications, and retractions
- Publish content on a timely basis

Characterization of Cardiac Dysfunction in Sepsis: An Ongoing Challenge

Zaky, Ahmed^{*}; Deem, Steven^{*}; Bendjelid, Karim[†]; Treggiari, Miriam M.^{*}

Abstract

ABSTRACT: Sepsis-induced cardiomyopathy (SIC), which is a common morbid condition, occurs in patients with severe sepsis and septic shock. The clinical characterization of SIC has been largely concept-driven. Heart function has traditionally been evaluated according to two basic conceptual models: a hydraulic pump system, whereby the output from the heart is entirely dependent on its input, or a hemodynamic pump, whereby the cardiac output is a function of preload, global ventricular performance, and afterload. Minimal attention has been given to the intrinsic contractile function of the heart or to the interaction between the peripheral circulation and the intrinsic myocardial function in sepsis. Currently, SIC is assumed to be the result of the interaction of microorganisms that activate the physiopathological pathways and cellular signaling mechanisms that lead to intrinsic myocardial dysfunction. However, the animal models used to study SIC exhibit multiple limitations. This review addresses the conceptual background, historical perspectives

Annals of Intensive Care is an online peer-reviewed journal aimed at publishing high-quality review articles and original research papers on intensive care medicine. It is intended

for all critical care providers (attending physicians, fellows, residents, nurses, and physiotherapists) seeking to update their own knowledge to ensure they provide the best care for their patients.
